

LaunchMind — Complete Project Brief v2

AI Marketing Operating System for App Founders Vijay Tomar · Phoenix, AZ · July 2026 · Built with Claude Code + Claude Sonnet 4.6

Overview

What it is	AI marketing OS — paste app URL → get 30/60/90 day strategy + content assets + managed ads
Markets	USA (Stripe/USD) + India (Razorpay/INR) from day 1
Tiers	Free · Solo \$19/₹999 · Builder \$49/₹2,499 · Studio \$99/₹4,999
AI models	Claude Sonnet (strategy/copy) · Haiku (scoring/short) · ElevenLabs (voice) · Creatomate (video) · Flux.1 Schnell (images)
Stack	Next.js 14 + Fastify + Supabase + Oracle VM + Vercel
Build method	Claude Code — founder-led, no agency
Build state	Phase 5 Week 20 — all core features complete

1. Product Vision

LaunchMind solves one specific problem: solo app founders know how to build apps but not how to market them. They guess at channels, burn money on agencies, or do nothing. LaunchMind gives them a CMO-level marketing system starting with just an App Store URL.

Core Loop

- Discover** — paste App Store / Play Store / Website URL → AI scrapes app metadata, 50 reviews, competitors, ASO keywords, website signals, and collects all existing marketing images
- Confirm** — AI generates ICP brief → founder reviews every field, corrects errors, adds MOAT and best customer quote, validates competitors, selects markets
- Execute** — AI generates 22 structured content assets for 6 channels: WhatsApp, Meta, Google UAC, ASO, Email, LinkedIn + Video + Community + Social Proof + visual ad creatives
- Learn** — every Sunday: brief arrives with what worked, what to kill, next actions → content regenerates with learnings + performance data applied

Pricing

Tier	Price USA	Price India	Tokens/mo	Key Features
Free	\$0	₹0	50	1 product · strategy preview only · no posting
Solo	\$19/mo	₹999/mo	300	1 product · 1 channel · full strategy + weekly brief

Builder	\$49/mo	₹2,499/mo	1,000	3 products · all channels · Meta + Google · USA + India
Studio	\$99/mo	₹4,999/mo	3,000	10 products · workspaces · white-label · API access

Token Cost Reference

Action	Tokens	Model
Strategy generation	50	Sonnet
Weekly brief	20	Sonnet
Content asset batch	20	Sonnet
Review analysis	15	Haiku
ICP structuring	10	Haiku
Brand voice extract	10	Haiku
Brand voice apply	5	Haiku
Scoring / classify	5	Haiku

2. Full Tech Stack

2.1 Frontend

Layer	Tool	Notes
Framework	Next.js 14 App Router	Server + client components, file-based routing
UI	Tailwind CSS + shadcn/ui	Design tokens; never build custom shadcn equivalents
Design system	Slate & Sage (custom)	Light theme · #28304a sidebar · #059669 primary
Typography	Syne + DM Sans + DM Mono	Syne=display, DM Sans=body, DM Mono=data/metrics
Icons	@tabler/icons-react v3	Outline only, never filled. v3 uses Icon prefix not Tb
Hosting	Vercel	Auto-deploy on push to main
Auth	Supabase Auth SDK	15-min JWT + rotating refresh tokens
Analytics	PostHog	After cookie consent only
Error tracking	Sentry	Client-side capture

2.2 Backend

Layer	Tool	Notes
Runtime	Node.js + Fastify	Typed routes, Zod validation on all inputs
Hosting	Oracle Cloud VM	Docker + Nginx + GitHub Actions CI/CD
Database	Supabase Postgres	RLS on every table. Additive migrations only.
Vector store	pgvector (in Supabase)	ICP embeddings — no separate Pinecone
Queue	Upstash Redis + BullMQ	Weekly cron + job retries, exponential backoff
Scraping static	Cheerio	App Store metadata + website scraping
Scraping dynamic	Playwright	Play Store + reviews (sandboxed worker)
Token encryption	AES-256 + AWS KMS	OAuth tokens only — key never in DB
Perimeter	Cloudflare WAF	DDoS, rate limiting, TLS 1.3 only
Email	Resend	Transactional + weekly brief delivery
Payments USA	Stripe	Subscriptions + one-time token top-ups
Payments India	Razorpay	UPI + cards + net banking
Error tracking	Sentry	Wired into Fastify error handler
Audit logs	Axiom	Immutable append-only

2.3 AI Services

Service	Model/API	Used For
Claude Sonnet	claude-sonnet-4-6	Strategy, long-form copy, video scripts, LinkedIn posts, weekly brief narrative
Claude Haiku	claude-haiku-4-5-20251001	Short assets (UAC, ASO), quality scoring (0–1), char limit enforcement, Hinglish translation
ElevenLabs	TTS API	Voiceover for Reels, Shorts, App Store preview, WhatsApp voice note. DEFAULT: natural AI voice (Indian English / Hindi / Hinglish). OPTIONAL: founder voice clone from 60-sec sample
Creatomate	Video assembly API	Frames + MP3 audio + text overlays → final MP4. Handles timing, captions, transitions
Replicate	Flux.1 Schnell	AI marketing images. 3 styles: photorealistic · graphic · mockup. Anti-split prompts. Logo compositing via Sharp. Phase 1: uses real app screenshots for mockup style — no AI hallucination

2.4 Image Generation Pipeline (Built Week 20)

This is the visual ad creative system. Every new product intake automatically collects real marketing images.

At Intake (intakeWorker.ts ~75% progress step): `marketingImagesService.ts` collects from 3 sources and stores permanently in Supabase Storage:

- 1. **App Store / Play Store screenshots** — up to 5, downloaded to `content-assets/{founderId}/{productId}/source-images/screenshot_N.png`
- 2. **Website hero/feature images** — OG image + hero section imgs + large srcset, stored as `hero_N.jpg`
- 3. **Google Custom Search Images** — `"{appName}" mobile app` query, stored as `web_N.jpg` (requires `GOOGLE_CUSTOM_SEARCH_API_KEY`)

URLs are permanent Supabase Storage public URLs (store CDN URLs expire). Stored in `products.scraped_meta.marketingImages[]`.

At **Generate Image (contentService.ts)**:

Style	Source	Output
mockup + real screenshots exist	Real screenshot from Storage (no Flux.1)	Logo composited bottom-right, Sharp PNG
mockup + no screenshots	Flux.1 photorealistic fallback	Logo composited if configured
photorealistic	Flux.1 with real app context hint	Logo composited if configured
graphic	Flux.1 illustration style	Logo composited if configured

Anti-hallucination system: `ANTI_SPLIT` + `ANTI_TEXT` + `ANTI_DARK` negative prompts prevent split-panel before/after compositions. `_extractPositiveScene()` strips "left shows X, right shows Y" patterns from briefs before sending to Flux.1.

Logo compositing: Sharp resizes logo to 14% of image width, places bottom-right at 4% padding. Transparent background preserved.

3. Data Model

12 tables. Every table has RLS — founders access only their own data. All migrations additive only (001–030 applied). No columns ever dropped or renamed.

3.1 founders

```
id, email, name, plan (free/solo/builder/studio), mfa_enabled, token_balance,
onboarding_step, deleted_at (soft delete – email anonymised on GDPR delete),
created_at, updated_at
```

3.2 products

```
id, founder_id, name, store_url, platform (app_store/play_store),
app_store_url, play_store_url, website_url,
category, markets (text[]), price_tier,
confirmed_icp (JSONB), competitor_set (JSONB),
scraped_meta (JSONB – includes marketingImages[], screenshots[]),
website_meta (JSONB – title, description, logoUrl, ogImage, heroImages[]),
founder_context (JSONB – budget, stage, goal, audience, MOAT, bestCustomerQuote,
etc.),
screenshot_analysis (JSONB – summary, tone, primaryColor),
```

```
brand_voice_profile (JSONB),
content_preferences (JSONB – text/video/visual/community/socialProof prefs + logoUrl +
imageStyle),
selected_markets (text[]), primary_channel (text), excluded_channels (text[]),
intake_step (0=new, 1=scraping, 2=scraped, 3=context, 4=screenshots, 6=confirmed),
icp_embedding (vector 1536), workspace_id,
archived_at, archive_reason,
last_scraped_at, created_at, updated_at
```

3.3 platform_tokens

```
id, founder_id, platform (meta/google/whatsapp/linkedin/email),
encrypted_token (AES-256 – NEVER returned to frontend),
kms_key_id, scopes (text[]), expires_at, revoked_at, created_at
UNIQUE(founder_id, platform)
```

3.4 campaigns

```
id, product_id, founder_id,
channel (meta/google/whatsapp/linkedin/email/aso_rewrite),
market (usa/india), status
(draft/pending_approval/approved/launched/paused/completed),
hook_type, copy_text, audience_config (JSONB), spend_cap (JSONB),
external_campaign_id, action, ai_tokens_consumed,
approved_at (NULL = NOT approved – hard server-side gate),
launched_at, created_at, updated_at
```

Rule: No campaign ever posts to any platform unless `approved_at` IS NOT NULL. Checked in Fastify route handler. Frontend cannot bypass.

3.5 campaign_metrics

```
id, campaign_id, founder_id, week_start (date),
impressions, clicks, installs, cpi, ctr, roas,
top_performing_asset, raw_platform_data (JSONB), collected_at
UNIQUE(campaign_id, week_start)
```

3.6 weekly_briefs

```
id, product_id, founder_id, week_of (date),
what_worked, what_to_kill, next_actions (JSONB),
generated_assets (JSONB), ai_tokens_consumed,
status (draft/sent/acknowledged), sent_at, created_at
UNIQUE(product_id, week_of)
```

3.7 content_assets

```
id, product_id, founder_id,
asset_type (22 types – see Section 5),
```

```
channel, market, language,
text_content, structured_data (JSONB),
media_url (video/audio/image – Supabase Storage URL),
media_type, duration_seconds, thumbnail_url,
quality_score (0–1, Haiku-scored), quality_flags (JSONB),
generation_week, hook_angle, status,
auto_approved, approved_at,
regen_count (max 3/week), regen_reasons (JSONB),
render_started_at, installs, impressions, cpi,
model_used, created_at, updated_at
```

3.8 content_learnings

```
id, product_id, founder_id, channel,
learning_type (regen_reason/approved/winner/loser),
insight, applies_to (text[]), week_number, created_at
```

3.9 playbook_signals — ANONYMISED

```
id, category, market, channel, hook_type, price_tier,
install_delta_pct, conversion_rate, retention_d7, week_number,
signal_embedding (vector 1536), created_at
No founder_id. No product_id. No PII. Never deleted.
52 seed rows (migrations 011 + 018). authenticated: SELECT only.
```

3.10 embedding_store

```
id, founder_id, product_id,
type (icp/campaign_history/learning_log),
content, embedding (vector 1536), metadata (JSONB), created_at
```

3.11 audit_logs — IMMUTABLE

```
id, founder_id, action, resource_type, resource_id,
metadata (JSONB), ip_address, user_agent, created_at
INSERT only. UPDATE + DELETE revoked from all non-superuser roles. Never deleted.
```

3.12 workspaces (Studio tier)

```
id, founder_id, name, client_name, created_at
```

4. Security Rules (Non-Negotiable)

- **Secrets:** `.env.local` only (gitignored). Never committed. Never in DB.
- **OAuth tokens:** AES-256 encrypted before DB write. Key in AWS KMS only — never in DB, never in env.
- **platform_tokens.encrypted_token** : NEVER returned to frontend under any circumstance.
- **JWT:** 15-min access tokens + rotating refresh tokens.

- **MFA:** TOTP enforced for all accounts — cannot be disabled by users.
- **RLS:** Every founder-data table has `founder_id = auth.uid()` policy. No exceptions.
- **Campaigns:** `approved_at` must be non-null before any platform post. Hard Fastify gate.
- **Spend guardrail:** Before paid campaign creation, fetch `spend_cap` + current week spend. Reject 422 if over cap.
- **Anomaly detection:** New device/country → re-auth required + Resend alert + audit log entry.
- **SAST:** Semgrep + ESLint security plugin — blocks merge on HIGH+.
- **DAST:** OWASP ZAP against staging before phase promotion.
- **Dependency scan:** npm audit + Snyk — blocks deploy on HIGH+ CVE.
- **GDPR:** `DELETE /founders/me` purges all personal data. `GET /founders/me/export` returns JSON. `playbook_signals` not deleted (PII-free).

5. Content Generation OS

5.1 All 22 Asset Types

Text assets:

Asset Type	Channel	Limit	Key Rule
whatsapp_broadcast (×3 variants)	whatsapp	160 chars each	painFirst · socialProof · reEngagement. Hinglish variant if language=hinglish
meta_headline (A/B)	meta	40 chars each	Both variants required. Pain-first or MOAT-forward
meta_body_india	meta	125 chars	Separate copy per market. MOAT in one sentence
meta_body_usa	meta	125 chars	Separate copy per market
google_uac_variants (×5)	google	30 chars each	V1=pain V2=MOAT V3=social proof V4=feature V5=quote
aso_subtitle	aso	30 chars	Primary keyword + pain-first. Different App Store vs Play Store
aso_description_opening	aso	250 chars	First 3 lines before "Read more" — highest conversion lever
email_day1	email	50 char subject	Onboarding. Pain → solution
email_day5	email	50 char subject	Re-engagement. Timed to dropOffPoint – 2 days
email_day14	email	50 char subject	Review request
linkedin_founder_story	linkedin	3,000 chars	Opens with MOAT hook. "Why I built this" narrative
linkedin_data_post	linkedin	3,000 chars	Build-in-public. Metrics + learnings

community_whatsapp_group	whatsapp	—	Warm network post for India WhatsApp groups
community_facebook	meta	—	Facebook group discussion post
community_indiehackers	other	—	Build-in-public Indie Hackers post
community_twitter_thread	other	—	Twitter/X thread (array of tweets)
social_proof_case_study	other	—	Metrics-based case study
social_proof_testimonial	other	—	Quote card brief for design
social_proof_review_response	other	—	Positive + negative review response templates
meta_image_brief	meta	—	Visual brief → Flux.1 image generation
carousel_brief	meta	—	Carousel brief → Flux.1 image generation

Video/audio assets:

Asset Type	Duration	Pipeline
video_reels_30s	30 sec	Claude Sonnet script (4 scenes) → ElevenLabs MP3 → Creatomate MP4 (1080×1920)
video_shorts_60s	60 sec	Claude Sonnet script (5 scenes, adds social proof moment) → ElevenLabs → Creatomate
video_app_store_preview	30 sec	Real app screenshots as frames → ElevenLabs → Creatomate (886×1920)
whatsapp_voice_note	30 sec	ElevenLabs MP3 only (no video). Hinglish by default

Video cost: ~\$0.43/video (ElevenLabs \$0.05 + Creatomate \$0.25 + storage \$0.00). **Video NEVER auto-approves regardless of approval_mode setting.**

5.2 Haiku Quality Scoring

Every text asset scored 0–1 by Claude Haiku before saving. Score < 0.7 = auto-regenerate (up to 2 retries). Scored on: char limit compliance, MOAT present, pain-first opening, no hallucinated claims, market-appropriate tone.

5.3 Approval Model Progression

Stage	Trigger	Behaviour
Manual (Weeks 1–2)	Default from signup	Every asset shown, approve button required
One-tap (Weeks 3–4)	After 3 weeks of use	"Approve all text assets" button. Can still edit/regen.

Auto (Week 5+)	After 5 weeks of use	Generates Sunday, publishes Tuesday unless owner taps "Hold"
Paid channels	Always	Meta + Google NEVER auto-approve. Always explicit.
Video assets	Always	Founder must watch and approve. No exceptions.

5.4 Learning Loop

Weekly: `content_learnings` table captures regen reasons, approved winners, killed losers. Applied as context in next week's content generation. Updates `brand_voice_profile` on products. Prevents same weak patterns re-appearing.

6. UX — All Screens (Current State, Week 20)

Design System: Slate & Sage

Colours:

- `--page: #f2f3f6` — app background
- `--surface: #ffffff` — cards, topbar, modals
- `--raised: #ecef3` — inputs, metric blocks
- `--sidebar: #28304a` — left nav (dark navy)
- `--sage: #059669` — primary CTA, success, active states
- `--ink: #1b1f2e` — primary text
- `--ink2: #626880` — secondary text
- `--indigo: #4f46e5` — accent (current plan, badges)
- `--amber: #d97706` — India market badge, warnings

Typography: Syne (display/headings) · DM Sans 13px (body) · DM Mono (metrics/numbers)

This is a LIGHT-THEME app. Dark backgrounds are never used for app pages.

Auth screens (3 screens)

/login LaunchMind wordmark (Syne, `--ink`), subline "AI marketing OS". Email + password fields (`bg-raised`). Sage "Sign in" button. Google OAuth button. Link to signup. MFA redirect after sign-in if enabled.

/signup Name + email + password. Sage "Create account" button. Google OAuth. Link to login.

/mfa 6-digit TOTP input. "Verify" button. "Lost authenticator?" link. Cannot be bypassed.

Dashboard layout (persists across all dashboard screens)

Sidebar (196px, `bg-sidebar` dark navy):

- LaunchMind logo + wordmark (top)
- Nav items: Dashboard · Products · Campaigns · Briefs · Insights · Workspaces · Channels · Billing · Settings
- Active item: `bg-[--sage-d]` border `[--sage-b]` text `[--sage-l]`
- Inactive: text-`[--s-text2]` hover `bg-white/6`
- Token balance chip at bottom (mono font, amber warning if < 20% remaining)

- User email + avatar at very bottom

Topbar (bg-surface , border-bottom):

- Breadcrumb (current section)
- Notification bell
- "New product" button (sage, top-right)

/dashboard — Main Dashboard

4-column metric grid (top):

- **Products** — count of active products
- **Campaigns** — count of launched campaigns
- **Installs this week** — sum from campaign_metrics
- **Top channel** — highest installs channel name

2-column main row:

- **LEFT — Products list** (scrollable): each row has app name, market badges (USA sage / India amber), ICP confirmed checkmark, "View strategy →" link
- **RIGHT — Latest brief** (scrollable): what worked narrative, what to kill, AI-generated summary

Channel Performance table (bottom):

- Columns: Channel · Impressions · Clicks · Installs · CPI · ROAS
- One row per active channel

/dashboard/products — Products List

Header: "Products" + "Add product" button (sage).

Active product cards (grid):

- App name (Syne bold) + category
- Market badges: USA (bg-[--sage-d]) + India (bg-[--amber-d])
- ICP confirmed checkmark (sage)
- Platform badge (App Store / Play Store)
- Three-dot overflow menu (ProductMenu component):
 - View strategy
 - Edit context
 - Archive (→ confirmation dialog, amber warning)

Archived section (collapsed at bottom, expandable):

- "N archived products" toggle
- Each archived product: name + archived date + "Restore" button + "Delete permanently" button (requires typing DELETE)

7-Step Product Intake (/dashboard/products/new/*)

IntakeSteps progress bar (top of every step): 7 steps with labels and completion indicators.

Step 1: URLs (/products/new) Three URL inputs: App Store URL · Play Store URL · Website URL. Platform auto-detected. At least one store URL required. "Analyse my app →" sage button. ~10 seconds for founder.

Step 2: Your Story (/products/new/context) 5 conversational sections (ChipGroup + text inputs):

- Conv 1: Budget (chips: "< \$500/mo" · "\$500–2k" · "\$2k–10k" · "\$10k+") + stage + primary goal
- Conv 2: Audience size + warm network (chips: WhatsApp group / LinkedIn connections / Email list) + geography + language (chips: English / Hindi / Hinglish / Tamil / Telugu)
- Conv 3: Channels tried (chips: WhatsApp / Meta / Google / LinkedIn / ASO / Email) + monetisation + drop-off point + first user action
- Conv 4: MOAT (text) + peak season + screenshot upload (drag-and-drop)
- Conv 5: Best customer quote (textarea — used verbatim in all copy)

Step 3: Analysis (/products/new/analysis) Live progress (6 items, each with spinner → checkmark):

- App Store / Play Store metadata
- Reviews analysed
- Finding competitors
- Scanning your website
- Matching playbook signals
- Building founder-specific plan
- *(internally: + collecting marketing images at ~75% — not shown as a step)*

Elapsed timer (amber if > 60s). "← Start over" button.

Step 4: ICP Review (/products/new/icp) Every AI-generated field is inline-editable:

- Target user (text)
- Primary market (select)
- Pain points (chip list — add/remove)
- Copy signals (chip list — accept/reject each)
- Price tier
- Category

"Looks good, next →" sage button.

Step 5: Competitors (/products/new/competitors) List of AI-found competitors. Each has: name, rating, top complaint, gap vs your app.

- ✓ Confirm (keeps as competitor)
- ✕ Reject (removes)
- ○ Add competitor (manual entry)

Step 6: Markets (/products/new/markets) 4-market grid (USA · India · UK · Canada).

- Each market card: CPI estimate, channel recommendation
- USA: sage badge. India: amber badge.
- "Tried channel" warning: amber chip if founder said they tried this channel in Step 2
- Pick ONE primary channel for Week 1 (radio select)

Step 7: Confirm (/products/new/confirm) 3-column summary:

- LEFT: Scraped app data (name, rating, category, install range)
- CENTRE: ICP brief (target user, pain points, markets)
- RIGHT: MOAT box + best customer quote

Brand assets card (NEW Week 20):

- Logo preview (48x48 px)
- Logo URL input (pre-filled if auto-detected from website)

- "Include logo in generated images" toggle (default ON)

"Generate strategy →" sage button (calls `POST /products/:id/strategy/generate`).

`/dashboard/products/[id]/strategy` — Strategy Page

Header: app name + "Marketing Strategy" + "30/60/90 day plan for USA + India"

Tabs: Week 1–4 · Week 5–8 · Week 9–12

Each week: channel recommendation card, copy hook for that week, asset preview.

Playbook Insights box (Builder/Studio only):

- "Similar apps at your price tier in USA achieved X% install uplift with this hook type"
- Solo/Free: locked with "Upgrade to Builder to unlock" message

India tab: hidden for Free/Solo tiers.

`/dashboard/campaigns` — Campaigns

Amber banner (if any campaigns are in `pending_approval` status): "N campaigns waiting for your approval"

Table columns:

- Channel (bare colored icon — no background box)
- Product
- Market badge (USA/India)
- Status badge (draft/pending/approved/launched/paused)
- Budget
- Installs
- CPI
- Actions (Approve · Pause · View)

Approval dialog (modal):

- Copy preview
- Audience config summary
- Spend cap
- "Approve and launch" sage button

`/dashboard/briefs` — Weekly Briefs

2-column layout (1fr 1fr, stacks to 1-col on < xl):

- **LEFT — Brief narrative:** "What Worked" section + "What to Kill" section + "Next Actions" list
- **RIGHT — Generated Assets:** AssetBlock grid (2-up)

AssetBlock component (renders all 9 visual/audio/text types):

- Text assets: copy preview + Edit + Approve + Regenerate
- Audio assets: play/pause button + waveform + download
- Video assets: thumbnail + play + download + approve
- Image assets: image preview + style selector pills (📷 Photo · 🎨 Graphic · 📱 Mockup) + Generate/New image + download

/dashboard/insights — Cross-Product Insights (Builder/Studio)

Top KPI row: Total installs · Top channel · Avg CPI · Best market

Channel bar chart: installs per channel across all products.

Product comparison table: each product row with installs, top channel, CPI.

/dashboard/workspaces — Agency Workspaces (Studio only)

List of workspaces (name + client name + product count). "New workspace" button. Delete workspace (with confirmation). Brand voice preview per workspace.

/dashboard/channels — Channel Connections

5 channel cards: WhatsApp · Meta · Google · LinkedIn · Email

Connected card: `border: 1.5px solid var(--sage-b)` green border. "Connected" badge.

"Disconnect" link. Disconnected card: default border. "Connect" button (sage). Plan-gated: Solo sees

"Builder required" badge on Meta/Google. Cannot connect.

Security section (2x2 grid, auto-collapse to 1-col on narrow):

- API token status
 - OAuth scopes granted
 - Last token refresh
 - Lock icon: sage green (`var(--sage)`)
-

/dashboard/billing — Billing & Plan

Current plan card: plan name + renewal date + "Manage" button. USD/INR toggle (top-right).

Plan comparison grid (2-col at <1280px, 4-col at 1280px+):

- Free · Solo · Builder · Studio
- Current plan highlighted with `border: 1.5px solid var(--indigo-b)`
- "Upgrade" button (sage) on non-current plans

Token top-up packs (1-col mobile, 3-col sm+):

- 300 tokens — \$9
 - 1,500 tokens — \$39
 - 5,000 tokens — \$99 "Buy" button per pack.
-

/dashboard/settings — Settings

Left nav (170px, `bg-surface`, `border-right`): 7 tabs with icons:

- Profile · Security · Content types · Voice clone · Notifications · Products · Account management

Active tab: `bg-[--sage-d]` `border [--sage-b]` text sage.

`?tab=profile` : Full name field + email (read-only) + "Save changes" button.

?tab=security : MFA status (Set up / Configured). Change password. Active sessions list with "Sign out all devices" button.

?tab=content (Content types): Toggle switches for each content category:

- Text assets (WhatsApp, Meta, Google, ASO, Email, LinkedIn)
- Video assets (Reels 30s, Shorts 60s, App Store Preview, WhatsApp Voice Note)
- Visual assets (Meta image, Carousel)
- Community posts (WhatsApp group, Facebook group, Indie Hackers, Twitter thread)
- Social proof (Case study, Testimonial card, Review responses)

Live token cost preview (updates as toggles change).

Visual generation settings (bottom of tab):

- Default image style selector: 3 buttons (🖼️ Photorealistic · 🎨 Graphic · 📱 Mockup)
- Logo URL input (applies as default for all new generated images)

?tab=voice (Voice clone): DEFAULT section: ElevenLabs natural AI voice selector (Indian English · Hindi · Hinglish). OPTIONAL section: "Record 60-second sample" → upload → "Clone my voice" button (Studio only). Voice clone ID displayed if active.

?tab=notifications : Toggles: Sunday brief delivery · Campaign approval reminders · Low token warning (< 50 remaining).

?tab=products : Active products list (name + market badges + "Archive" button per product). Archived products list (name + archived date + "Restore" button + "Delete permanently" button). Archive: shows confirmation dialog (amber warning). Campaigns paused. Permanent delete: requires typing "DELETE" exactly. Deletes all campaigns, metrics, briefs, content assets. audit_logs never deleted.

?tab=account (Account management — renamed from "Danger Zone"):

- "Export my data" → downloads GDPR JSON
- "Delete account" → type "DELETE" → purges all personal data (soft delete on founders, anonymises email)

7. Backend API Routes

Products:

- POST /products/scrape — start async intake job (BullMQ)
- GET /products/scrape/:jobId — poll job status + progress
- POST /products/intake/context — save founder context (Step 2)
- POST /products/intake/screenshots — analyse screenshots via Haiku vision
- POST /products/confirm — confirm ICP + logo + markets → saves to DB
- GET /products — list active (non-archived) products
- GET /products/archived — list archived products
- POST /products/:id/archive — archive (pauses campaigns)
- POST /products/:id/restore — restore (checks plan product limit)
- DELETE /products/:id — permanent delete (must be archived first)
- POST /products/:id/strategy/generate — generate 30/60/90 strategy
- GET /products/:id/strategy — fetch strategy

Content:

- GET /content-assets/:productId — list all assets for product
- POST /content-assets/:productId/generate — generate full asset batch
- POST /content-assets/:id/regenerate — regen single asset (max 3/week)
- POST /content-assets/:id/approve — approve asset
- POST /content-assets/:id/generate-image?style= — generate AI image or use real screenshot
- POST /content-assets/:id/generate-voice — generate ElevenLabs audio

Settings:

- GET /settings/content-preferences — fetch prefs for authenticated founder
- PUT /settings/content-preferences — save prefs
- POST /settings/voice-clone — upload 60-sec sample, trigger ElevenLabs clone

Founders:

- GET /founders/me — profile
- DELETE /founders/me — GDPR delete
- GET /founders/me/export — GDPR JSON export
- GET /founders/me/sessions — active sessions
- PUT /founders/me/notifications — save notification prefs
- GET /founders/insights — cross-product KPIs

8. Build Status (Accurate — July 2026)

 **Complete**

Feature	Notes
All 30 DB migrations (001–030)	RLS on every table. Additive only.
Full Fastify backend (all routes above)	Zod validation, Sentry errors, audit logs
BullMQ intake worker	Async scrape + marketing image collection
BullMQ weekly brief cron	Sunday generation, Resend delivery
7-step product intake wizard	All 7 steps + IntakeSteps progress bar

Strategy generation (Claude Sonnet)	30/60/90 day plan + content asset fire-and-forget
Content OS — all 22 asset types	Text + video + audio + visual + community + social proof
Haiku quality scoring	0–1 score, auto-regen if < 0.7
ElevenLabs voice (wired)	Natural AI voice + founder voice clone
Creatomate video (wired)	Reels 30s, Shorts 60s, App Store preview
Flux.1 image generation (wired)	3 styles, anti-split prompts, logo compositing
Marketing images pipeline	Real screenshots collected at intake, used for mockup ads
Logo auto-detection	From website apple-touch-icon/og:image at intake
Logo compositing	Sharp bottom-right, 14% width, 4% padding
Settings refactor	Left-nav + 7 tabs (all tabs implemented)
Product archive / restore / delete	Three-dot menu, archived section, permanent delete
AssetBlock component	All 9 render types, style picker, play/download/regen
Anomaly detection	New device/country → re-auth + Resend alert
GDPR delete + export	/founders/me routes
Stripe billing (wired)	Needs live STRIPE_SECRET_KEY on Oracle VM
Razorpay billing (wired)	INR pricing configured
Workspaces (Studio)	List/create/delete + brand voice preview
Insights page	Cross-product KPIs + channel breakdown
Playbook signals	52 seed rows, Builder/Studio access, locked for Solo/Free
Supabase Storage	content-assets bucket (public), images permanently stored
Seed data	vijay@lm.com · ClientPulse product · 3 campaigns · 52 playbook signals

⚠️ Wired but needs production keys on Oracle VM

Item	Key needed
Flux.1 image generation	REPLICATE_API_TOKEN
ElevenLabs voice generation	ELEVENLABS_API_KEY
Creatomate video assembly	CREATOMATE_API_KEY
Stripe plan-change flow	STRIPE_SECRET_KEY
Google marketing image search	GOOGLE_CUSTOM_SEARCH_API_KEY + GOOGLE_CUSTOM_SEARCH_ENGINE_ID

✖ Genuinely not yet built

Gap	Priority	Impact
Homepage	P1 — Critical	launchmind-homepage.html exists but not converted to Next.js. Root / redirects to dashboard. No organic acquisition.
Responsive design	P1 — Critical	India is mobile-first. All screens are desktop-only. Need: bottom nav (<640px), icon sidebar (640–1024px).
campaign_metrics from real platforms	P2 — High	Currently only seed data. Need Meta/Google API polling in weeklyBriefWorker.
Content calendar sequencing	P3 — Medium	Same hook can run on all channels same week. Need staggered 4-week arc.
Creative fatigue flag	P3 — Medium	6-week campaigns not flagged. Conversion drops without anyone knowing.
India localisation by region	P4 — Medium	Mumbai vs Chennai vs Delhi differ in tone. Currently treated as one market.
Stability AI integration	P5 — Low	Replaced by Flux.1. Deferred indefinitely.

9. Infrastructure + Environment Variables

All 35+ keys. `.env.local` is the single env file for local dev (gitignored). Oracle VM env file for production. Vercel env vars for frontend.

Variable	Service	Required For
ANTHROPIC_API_KEY	Anthropic	All Claude Sonnet + Haiku calls
ELEVENLABS_API_KEY	ElevenLabs	Text-to-speech + voice clone
CREATOMATE_API_KEY	Creatomate	Video assembly (MP4 rendering)
REPLICATE_API_TOKEN	Replicate	Flux.1 Schnell image generation
STABILITY_AI_KEY	Stability AI	Deferred — not used in current build
SUPABASE_URL	Supabase	Database + auth + storage
SUPABASE_SERVICE_ROLE_KEY	Supabase	Backend admin access (NEVER expose to frontend)
SUPABASE_ANON_KEY	Supabase	Frontend public key
AWS_KMS_KEY_ID	AWS KMS	OAuth token encryption key
AWS_ACCESS_KEY_ID	AWS	KMS access credentials
AWS_SECRET_ACCESS_KEY	AWS	KMS access credentials
AWS_REGION	AWS	KMS region

STRIPE_SECRET_KEY	Stripe	USA subscriptions + token top-ups
STRIPE_WEBHOOK_SECRET	Stripe	Webhook signature verification
RAZORPAY_KEY_ID	Razorpay	India UPI + card payments
RAZORPAY_KEY_SECRET	Razorpay	India payment verification
RESEND_API_KEY	Resend	Transactional email + weekly briefs
REDIS_URL	Upstash	BullMQ queue (weekly cron, intake jobs)
UPSTASH_REDIS_TOKEN	Upstash	Auth for Upstash REST API
SENTRY_DSN	Sentry	Error tracking (client + server)
POSTHOG_KEY	PostHog	Product analytics
GOOGLE_CUSTOM_SEARCH_API_KEY	Google	Web marketing image search at intake
GOOGLE_CUSTOM_SEARCH_ENGINE_ID	Google	Custom Search Engine ID
NEXT_PUBLIC_SUPABASE_URL	Supabase	Frontend (public, safe to expose)
NEXT_PUBLIC_SUPABASE_ANON_KEY	Supabase	Frontend (public, safe to expose)
NEXT_PUBLIC_POSTHOG_KEY	PostHog	Frontend analytics
NEXT_PUBLIC_SENTRY_DSN	Sentry	Frontend error capture
JWT_SECRET	Auth	Fastify JWT verification
CORS_ORIGIN	Fastify	https://launchmind.com,http://localhost:3000
PORT	Fastify	Default 3001
DATABASE_URL	Supabase	Direct Postgres URL (for migrations)

10. Sharing This Project

With a co-founder or developer

Share these 3 files:

1. `CLAUDE.md` — living technical reference (architecture, data model, security, current build state)
2. `launchmind-ux-slate-sage.html` — all 12 dashboard screens as interactive HTML
3. `launchmind-homepage.html` — marketing homepage design

These 3 files + this brief = complete picture of everything built.

With another AI (ChatGPT, Gemini, Gemini Deep Research, etc.)

Paste `CLAUDE.md` directly. Add: *"Review this architecture for gaps, security issues, scalability concerns, or missing product features. Current build is Phase 5 Week 20 of 20. The genuine remaining gaps are: homepage, responsive design, real campaign metrics from platform APIs."*

For a deeper architectural review, also paste Section 2 (Tech Stack) and Section 3 (Data Model) from this document.

With an investor or advisor

Share this document (v2 brief) + the UX HTML files. Section 1 covers product vision, Section 8 covers build status honestly.

With a security reviewer

Share `CLAUDE.md` Section 4 (Security Rules) + Section 3 (Data Model) + the routes list in Section 7.

11. Technical Review Questions

Stack decisions to validate

- Is Oracle Cloud VM the right backend host, or should we migrate to Railway/Render for simpler DevOps at scale?
- Is BullMQ + Upstash Redis reliable enough for 2–3 minute video rendering jobs, or do we need a dedicated job queue (e.g. AWS SQS)?
- Is pgvector sufficient for semantic search at 10K+ products, or do we need Pinecone at scale?
- Is Creatomate (\$49/mo for 500 renders) the right choice vs FFmpeg on Oracle VM (\$0 but maintenance overhead)?
- Is Replicate (Flux.1 Schnell) the right image generation API, or should we use fal.ai/DALL-E/Midjourney API when available?
- Is the token model (50 tokens = strategy, \$0.43 = video) correctly priced against Anthropic API costs at scale?
- Is ElevenLabs multilingual v2 good enough for Hinglish, or do we need a dedicated Hindi TTS model?
- Should Supabase Storage be the permanent home for all generated media, or do we need S3/Cloudflare R2 at scale?

Product decisions to validate

- Is the 7-step intake too long? Would founders drop off before completing all 5 conversations in Step 2?
- Is the MOAT question (Conversation 4) positioned correctly, or should it be asked in Conversation 1?
- Is the approval model progression (manual → one-tap → auto) the right UX for building founder trust?
- Is \$0.43/video sustainable at Solo tier (\$19/mo) if founders generate 10+ videos/week? Solo tier needs a video cap.
- Should WhatsApp voice notes be the default India format, or WhatsApp broadcast text (higher deliverability)?
- Is content calendar sequencing (different hook angles per week, 4-week arc) worth the complexity at this stage?
- For the mockup image style: should we composite onto a phone frame template, or use raw screenshots directly?

India-specific questions

- Is WhatsApp Business API the right primary channel for India SMBs, or is Meta ads more cost-effective?

- Is the Hinglish generation (Haiku translation) accurate enough, or do we need a native speaker review step?
- Are the India CPI estimates (₹90 WhatsApp, ₹142 Google UAC) realistic for the home services / productivity category?
- Does PDPB 2023 affect how we store/process Indian user data in Supabase (US region)?
- Should Razorpay be the only India payment option, or add Paytm/PhonePe?

Security questions for review

- Is the AES-256 + AWS KMS approach for OAuth token storage the right architecture, or is a secrets manager (HashiCorp Vault) more appropriate at scale?
- Is the 15-min JWT + rotating refresh token approach consistent with Supabase Auth's built-in session management?
- Is RLS on every table sufficient for multi-tenant isolation, or do we need schema-per-tenant for Studio workspaces?
- Is the anomaly detection (new device/country → re-auth) too aggressive for mobile users who travel?

12. UX Reference — All Screens (Slate & Sage Design System)

Screenshots captured from `launchmind-ux-slate-sage.html` at 1440px viewport. Light theme · #28304a sidebar · #059669 sage primary · DM Sans + Syne + DM Mono

Auth Screens

Login

The image shows a login screen for 'LaunchMind', described as 'Your AI marketing operating system'. It features a white card on a light purple background. The card contains the following elements: the LaunchMind logo and tagline at the top; an 'Email' input field with the placeholder 'vijay@clientpulse.io'; a 'Password' input field with masked characters; a 'Forgot password?' link; a green 'Sign in →' button; a horizontal separator with the word 'or' in the center; a 'Continue with Google' button with the Google logo; and a link at the bottom that says 'Don't have an account? Sign up free'.

Your week at a glance

WHAT WORKED

WhatsApp pain-first hook drove 68% of all installs. "Stop chasing unpaid fees" outperformed every other message 4:1. App Store keyword "tutor payment tracker" moved from position 41 → 28.

WHAT TO KILL

LinkedIn: 2 installs in 3 weeks at \$48 CPL. Pausing immediately. Onboarding email has 12% open rate — below threshold. Rewrite recommended.

NEXT 7 DAYS — 3 ACTIONS

1 Send Tuesday WhatsApp broadcast (draft below, approve to schedule)

2 Rewrite App Store subtitle (new version below)

3 Request reviews from 5 most-active users (template below)
