

LMJuly18 — LaunchMind Complete Technical Reference

Master Index

Date: July 18, 2026 **Project:** LaunchMind — AI Marketing Operating System for App Founders **Status:** 12 Milestones Complete · Production-Ready · Pending Ops Tasks **Supabase Project:** gseqtbwdenjkwysregpp

How to Use This Reference

This documentation is split into 6 focused files. Read them in order for a full understanding, or jump directly to the relevant section.

File	Contents	Best for
LMJuly18-01-Overview-Architecture.md	Product vision, tech stack, infrastructure, security, non-negotiable rules	Starting point — understand what LaunchMind is and how it's built
LMJuly18-02-Database-Schema.md	All 61 migrations, every table schema, RLS policies, indexes	Database work, migrations, data modelling
LMJuly18-03-Backend.md	Every route endpoint, all services, workers, lib files, AI platform	Backend development, API integration, adding features
LMJuly18-04-Frontend.md	All pages with routes, all components, design system tokens, UX conventions	Frontend development, UI work, new pages
LMJuly18-05-Intelligence-Agents.md	AI platform, agent system, intelligence network, recommendation engine, marketing memory	AI/ML work, agent development, intelligence features
LMJuly18-06-Build-State-Roadmap.md	All 12 milestone summaries, test suite status, pending work, 65 ADRs index	Project management, understanding what's done, planning next steps

Quick-Reference Facts

Frontend: Next.js 14 App Router → Vercel
 Backend: Node.js + Fastify → Oracle Cloud VM (Docker)
 Database: Supabase Postgres → gsegtbwdenjkwysregpp
 AI models: claude-sonnet-4-6 (strategy/copy) · claude-haiku-4-5-20251001 (scoring)
 Image gen: Flux.1 Schnell via Replicate
 Video: Creatomate API
 Voice: ElevenLabs API
 Queue: Upstash Redis + BullMQ
 Payments: Stripe (USA) · Razorpay (India)
 Auth: Supabase Auth (ES256 JWT, 15-min tokens, TOTP MFA enforced)

Core Invariants (Never Violate)

- **Backend first:** Migration → route → test → frontend. No exceptions.
- **Additive migrations only:** Never drop/rename/retype columns or tables.
- **All AI calls through `aiPlatform.ts`:** `callSonnet` / `callHaiku` with required `auditCtx`.
- **Approve-before-post (§1.5):** `campaigns.approved_at` must be non-null before any platform publish. Server-side enforced.
- **Spend guardrails (§1.6):** Check `spend_cap` before any paid campaign creation.
- **Token-ready:** Every AI call routes through `consumeTokens(founderId, action, estimatedCost)`.
- **RLS on every table:** `founder_id = auth.uid()` on all founder-data tables. No exceptions.
- **Never return `encrypted_token` to frontend:** OAuth tokens are decrypted server-side only.
- **Violet (`--ai`) = AI provenance only:** Never a button, never a gradient fill. Border/badge/text only.
- **No invented metrics:** Only real data. Every degraded state renders honestly.

Stack: Next.js 14 + Vercel · Fastify + Oracle Cloud · Supabase · pgvector · BullMQ · Claude API · AWS KMS ·
